

<b>Interview Summary</b>	<b>Application No.</b> 09/987,413	<b>Applicant(s)</b> IIDA ET AL.	
	<b>Examiner</b> Christopher D RoDee	<b>Art Unit</b> 1756	

All participants (applicant, applicant's representative, PTO personnel):

- (1) Christopher D RoDee. (3) \_\_\_\_.
- (2) Stephen Tu, Reg. #52304. (4) \_\_\_\_.

Date of Interview: 25 February 2003.

Type: a) ☒ Telephonic b) ☐ Video Conference  
c) ☐ Personal [copy given to: 1) ☐ applicant 2) ☐ applicant's representative]

Exhibit shown or demonstration conducted: d) ☐ Yes e) ☒ No.  
If Yes, brief description: \_\_\_\_\_.

Claim(s) discussed: 1, 8 and 11.

Identification of prior art discussed: Applied art.

Agreement with respect to the claims f) ☐ was reached. g) ☒ was not reached. h) ☐ N/A.

Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: See Continuation Sheet.

(A fuller description, if necessary, and a copy of the amendments which the examiner agreed would render the claims allowable, if available, must be attached. Also, where no copy of the amendments that would render the claims allowable is available, a summary thereof must be attached.)

i) ☐ It is not necessary for applicant to provide a separate record of the substance of the interview (if box is checked).

Unless the paragraph above has been checked, THE FORMAL WRITTEN REPLY TO THE LAST OFFICE ACTION MUST INCLUDE THE SUBSTANCE OF THE INTERVIEW. (See MPEP Section 713.04). If a reply to the last Office action has already been filed, APPLICANT IS GIVEN ONE MONTH FROM THIS INTERVIEW DATE TO FILE A STATEMENT OF THE SUBSTANCE OF THE INTERVIEW. See Summary of Record of Interview requirements on reverse side or on attached sheet.

Examiner Note: You must sign this form unless it is an Attachment to a signed Office action.

  
**CHRISTOPHER RODEE**  
**PRIMARY EXAMINER**  
 Examiner's signature, if required

## Summary of Record of Interview Requirements

### Manual of Patent Examining Procedure (MPEP), Section 713.04, Substance of Interview Must be Made of Record

A complete written statement as to the substance of any face-to-face, video conference, or telephone interview with regard to an application must be made of record in the application whether or not an agreement with the examiner was reached at the interview.

### Title 37 Code of Federal Regulations (CFR) § 1.133 Interviews

#### Paragraph (b)

In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for reply to Office action as specified in §§ 1.111, 1.135. (35 U.S.C. 132)

#### 37 CFR §1.2 Business to be transacted in writing.

All business with the Patent or Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

The action of the Patent and Trademark Office cannot be based exclusively on the written record in the Office if that record is itself incomplete through the failure to record the substance of interviews.

It is the responsibility of the applicant or the attorney or agent to make the substance of an interview of record in the application file, unless the examiner indicates he or she will do so. It is the examiner's responsibility to see that such a record is made and to correct material inaccuracies which bear directly on the question of patentability.

Examiners must complete an Interview Summary Form for each interview held where a matter of substance has been discussed during the interview by checking the appropriate boxes and filling in the blanks. Discussions regarding only procedural matters, directed solely to restriction requirements for which interview recordation is otherwise provided for in Section 812.01 of the Manual of Patent Examining Procedure, or pointing out typographical errors or unreadable script in Office actions or the like, are excluded from the interview recordation procedures below. Where the substance of an interview is completely recorded in an Examiners Amendment, no separate Interview Summary Record is required.

The Interview Summary Form shall be given an appropriate Paper No., placed in the right hand portion of the file, and listed on the "Contents" section of the file wrapper. In a personal interview, a duplicate of the Form is given to the applicant (or attorney or agent) at the conclusion of the interview. In the case of a telephone or video-conference interview, the copy is mailed to the applicant's correspondence address either with or prior to the next official communication. If additional correspondence from the examiner is not likely before an allowance or if other circumstances dictate, the Form should be mailed promptly after the interview rather than with the next official communication.

The Form provides for recordation of the following information:

- Application Number (Series Code and Serial Number)
- Name of applicant
- Name of examiner
- Date of interview
- Type of interview (telephonic, video-conference, or personal)
- Name of participant(s) (applicant, attorney or agent, examiner, other PTO personnel, etc.)
- An indication whether or not an exhibit was shown or a demonstration conducted
- An identification of the specific prior art discussed
- An indication whether an agreement was reached and if so, a description of the general nature of the agreement (may be by attachment of a copy of amendments or claims agreed as being allowable). Note: Agreement as to allowability is tentative and does not restrict further action by the examiner to the contrary.
- The signature of the examiner who conducted the interview (if Form is not an attachment to a signed Office action)

It is desirable that the examiner orally remind the applicant of his or her obligation to record the substance of the interview of each case unless both applicant and examiner agree that the examiner will record same. Where the examiner agrees to record the substance of the interview, or when it is adequately recorded on the Form or in an attachment to the Form, the examiner should check the appropriate box at the bottom of the Form which informs the applicant that the submission of a separate record of the substance of the interview as a supplement to the Form is not required.

It should be noted, however, that the Interview Summary Form will not normally be considered a complete and proper recordation of the interview unless it includes, or is supplemented by the applicant or the examiner to include, all of the applicable items required below concerning the substance of the interview.

A complete and proper recordation of the substance of any interview should include at least the following applicable items:

- 1) A brief description of the nature of any exhibit shown or any demonstration conducted,
- 2) an identification of the claims discussed,
- 3) an identification of the specific prior art discussed,
- 4) an identification of the principal proposed amendments of a substantive nature discussed, unless these are already described on the Interview Summary Form completed by the Examiner,
- 5) a brief identification of the general thrust of the principal arguments presented to the examiner,  
(The identification of arguments need not be lengthy or elaborate. A verbatim or highly detailed description of the arguments is not required. The identification of the arguments is sufficient if the general nature or thrust of the principal arguments made to the examiner can be understood in the context of the application file. Of course, the applicant may desire to emphasize and fully describe those arguments which he or she feels were or might be persuasive to the examiner.)
- 6) a general indication of any other pertinent matters discussed, and
- 7) if appropriate, the general results or outcome of the interview unless already described in the Interview Summary Form completed by the examiner.

Examiners are expected to carefully review the applicant's record of the substance of an interview. If the record is not complete and accurate, the examiner will give the applicant an extendable one month time period to correct the record.

### Examiner to Check for Accuracy

If the claims are allowable for other reasons of record, the examiner should send a letter setting forth the examiner's version of the statement attributed to him or her. If the record is complete and accurate, the examiner should place the indication, "Interview Record OK" on the paper recording the substance of the interview along with the date and the examiner's initials.

Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: The Examiner and counsel discussed the proposed amendment (attached). Counsel stressed that the art does not suggest the particle diameter percent by number for particles having a size of no greater than 4 microns for the toner and developer. Counsel will provide specific remarks concerning this feature and a discussion of why the art does not fairly teach this limitation in combination with the other limitations claimed. With respect to claims 16 and 17 the Examiner expressed concern that the toner does not provide a structural limitation to the proposed apparatus.

## APPENDIX

## Changes to Claims:

Claim 8 is canceled.

The following is a marked-up version of the amended claim(s):

1. A toner for developing an electrostatic latent image comprising:  
a white color toner particle containing at least a binder resin and a colorant,  
with the particle having a volume average particle diameter of no greater than 14  $\mu\text{m}$  and a  
concentration of the colorant being 20 to 50% by weight with respect to the binder resin,  
wherein a ratio of white color toner particles having a particle diameter of no greater than 4  
 $\mu\text{m}$  is 6 to 25% by number with respect to the total number of the white toner particles; and  
an external additive containing a hydrophobic titanium oxide particle having  
a BET specific surface area of 40 to 250  $\text{m}^2/\text{g}$ ;  
wherein the absolute charge value of the toner is 20 to 50  $\mu\text{C}/\text{g}$ .
11. A developer for electrostatic latent images, which comprises:  
a toner for developing an electrostatic latent image comprising a white color  
toner particle containing at least a binder resin and a colorant, with the particle having a  
volume average particle diameter of no greater than 14  $\mu\text{m}$  and a concentration of the  
colorant being 20 to 50% by weight with respect to the binder resin, wherein a ratio of white  
color toner particles having a particle diameter of no greater than 4  $\mu\text{m}$  is 6 to 25% by  
number with respect to the total number of the white toner particles; and  
a carrier, with the carrier having a surface coated with a resin containing a  
fluororesin.
16. A developer unit, comprising:  
means for charging a photoreceptor;

\_\_\_\_\_ means for forming an electrostatic latent image by exposing the  
photoreceptor surface;

\_\_\_\_\_ means for forming a white toner image by developing the electrostatic latent  
image using a developer containing a toner according to claim 1;

\_\_\_\_\_ means for transferring said white color toner image onto a transfer body;

\_\_\_\_\_ means for forming a black toner image by developing an electrostatic latent  
image;

\_\_\_\_\_ means for transferring the black color toner image onto a transfer body; and

\_\_\_\_\_ -a plurality of developers for forming a multicolored image,

\_\_\_\_\_ wherein at least one of said developers is a developer containing the toner  
according to claim 1, and at least one of said developers contains a toner for developing  
electrostatic latent image containing a black color toner particle having a colorant  
concentration of 4 to 15%.

17. A developer unit comprising:

\_\_\_\_\_ means for charging a photoreceptor;

\_\_\_\_\_ means for forming an electrostatic latent image by exposing the  
photoreceptor surface;

\_\_\_\_\_ means for forming a white toner image by developing the electrostatic latent  
image using a developer containing a toner according to claim 1;

\_\_\_\_\_ means for transferring said white color toner image onto a transfer body;

\_\_\_\_\_ means for forming a black toner image by developing an electrostatic latent  
image;

\_\_\_\_\_ means for transferring the black color toner image onto a transfer body; and

\_\_\_\_\_ -a plurality of developers for forming a multicolored image,

\_\_\_\_\_wherein at least one of said developers is a developer according to claim 11, and at least one of the developers contains a toner containing a black color toner particle having a colorant concentration of 4 to 15%.

18. A method for forming images using a plurality of developers to form a multicolored image, comprising the steps of:
- charging a photoreceptor;
  - forming an electrostatic latent image by exposing the photoreceptor surface;
  - forming a white toner image by developing the electrostatic latent image using a developer containing a toner according to claim 1;
  - transferring said white color toner image onto a transfer body;
  - forming a black toner image by developing an electrostatic latent image using a ~~development~~developer containing a toner comprising a black color toner particle having a colorant concentration of 4 to 15%; and
  - transferring the black color toner image onto a transfer body.
19. A method for forming images using a plurality of developers to form a multicolored image, comprising the steps of:
- charging a photoreceptor;
  - forming an electrostatic latent image by exposing the photoreceptor surface;
  - forming a white toner image by developing the electrostatic latent image using the developer according to claim 11;
  - transferring said white color toner image onto a transfer body;
  - forming a black toner image by developing an electrostatic latent image using a ~~development~~developer containing a toner comprising a black color toner particle having a colorant concentration of 4 to 15%; and
  - transferring the black color toner image onto a transfer body.
